

Wunderlich ByPass Trail Construction May 2018

Yakima Construction has specialized equipment for trail work. They dug the trail and built rock retaining walls. Then spread and compacted base rock.

Click on the link below to see a video of the trail building machine in action.

<https://vimeo.com/271763404>

The trail was dug with the mini trail building machine shown below?

The big rocks were hauled in with the “buggies” to build retaining walls

A rock wall was built in the narrow spots and on the switchback turn with the trail building machine. Notice the opposable thumb on the grip.

DONE. This is the Entrance from Upper Alambique – Base rock has been spread and compacted

This is the switch back halfway down the trail.

This is the entrance from Lower Alambique Trail
